

# Case of Study - Portal of Austral Bank

Author:

AdministratorUser<info<spanclass="spamfilter">SPAMFILTER</span></info>@mzbusiness.com>

A team made by Mzbusiness.com and the Austral Bank determined the success of this project.

The Portal offers its visitors corporative information of the Bank and still the possibility to perform transactions using the Internet Banking.

The table of exchanges in the website is daily actualized, existing one workflow of approval of any information published in the website, a requirement of the Bank: a control system, where all the published information must be approved by another person.

Mzbusiness.com was responsible for the graphical layout, programming, implementation and hosting of the corporative area of the website. Also trained the managers of the portal and the staff responsible for the daily update of information in the portal.

This is the first presence of the Austral Bank in the Internet, that after one second privatization carried through for the Government, was acquired in January of 2002 for the Absa Group Limited, with headquarters in Johannesburg.

In this occasion the Absa Group Limited acquired 80% of the shares of the old Austral Bank and the remains 20%, managed for the Government of Moçambique, had started to belong to the Workers, Technicians and Directors of the Austral Bank.
